

Distant Future

*Quite  
Likely*

Near Future

*Highly  
Unlikely*

Intelligence is the product of  
**information processing**

Sam Harris

Technology will continue to **advance** in ways we can't even comprehend

Raymond Kurzweil

@IngoPhilipp ◊ The space of all possible intelligences is vast. We're by far not at the peak of intelligence.

3/3

Assumption

Human intelligence is a **minuscule dot**  
in the space of all possible intelligences

Robert Miles

:: **Conclusion** ◊ There seems to be nothing fundamentally stopping us from creating intelligent machines.

@IngoPhilipp ◊ Everything you hear is an opinion, not a fact. Everything you see is a perspective, not the truth.

Faith is **belief** w/o evidence and reason.  
That's also the definition of delusion.

Richard Dawkins

:: **Richard Feynman** ◊ Faith is not a good theory. Ask and doubt, then it gets a little harder to believe.

*Exploring  
The Hype*

*Exploring  
Intelligence*

*Exploring  
Testing*

“

Just as electricity transformed almost everything 100 years ago, today I actually have a hard time thinking of an industry that I **don't** think AI will **transform** in the next several years.

### Abstract

This paper is a survey of a large number of informal definitions of “intelligence” that the authors have collected over the years. Naturally, compiling a complete list would be impossible as many definitions of intelligence are buried deep inside articles and books. Nevertheless, the 70-odd definitions presented here are, to the authors’ knowledge, the largest and most well referenced collection there is.

**ANI**

Here's a **beautiful** women standing on the beach

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

@IngoPhilipp ◊ A sign of things to come?

Lee Se-Dol • Retired Nov 27th, 2019

:: **Playing Go** ◊ AlphaGo ◊ "AI is an entity that cannot be defeated."

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

:: **aka** ◊ Specialized ◊ Weak ◊ Purpose-Specific

**ANI**

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

Self-driving cars are a **great leap** forward

But they can only do **one thing**, e.g. self-driving cars can't play Chess

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

Sofia • Hanson Robotics

:: Ben Goertzel ◊ CEO & Founder SingularityNET & OpenCog

# *Artificial* **Narrow** *Intelligence*

A machine with the ability to apply intelligence to a **specific problem**

:: **aka** ◊ Specialized ◊ Weak ◊ Purpose-Specific

ANI

@IngoPhilipp

Sofia • Hanson Robotics

:: Ben Goertzel ◊ CEO & Founder SingularityNET & OpenCog

:: Marvin Minsky ◊ Co-Founder MIT AI Lab

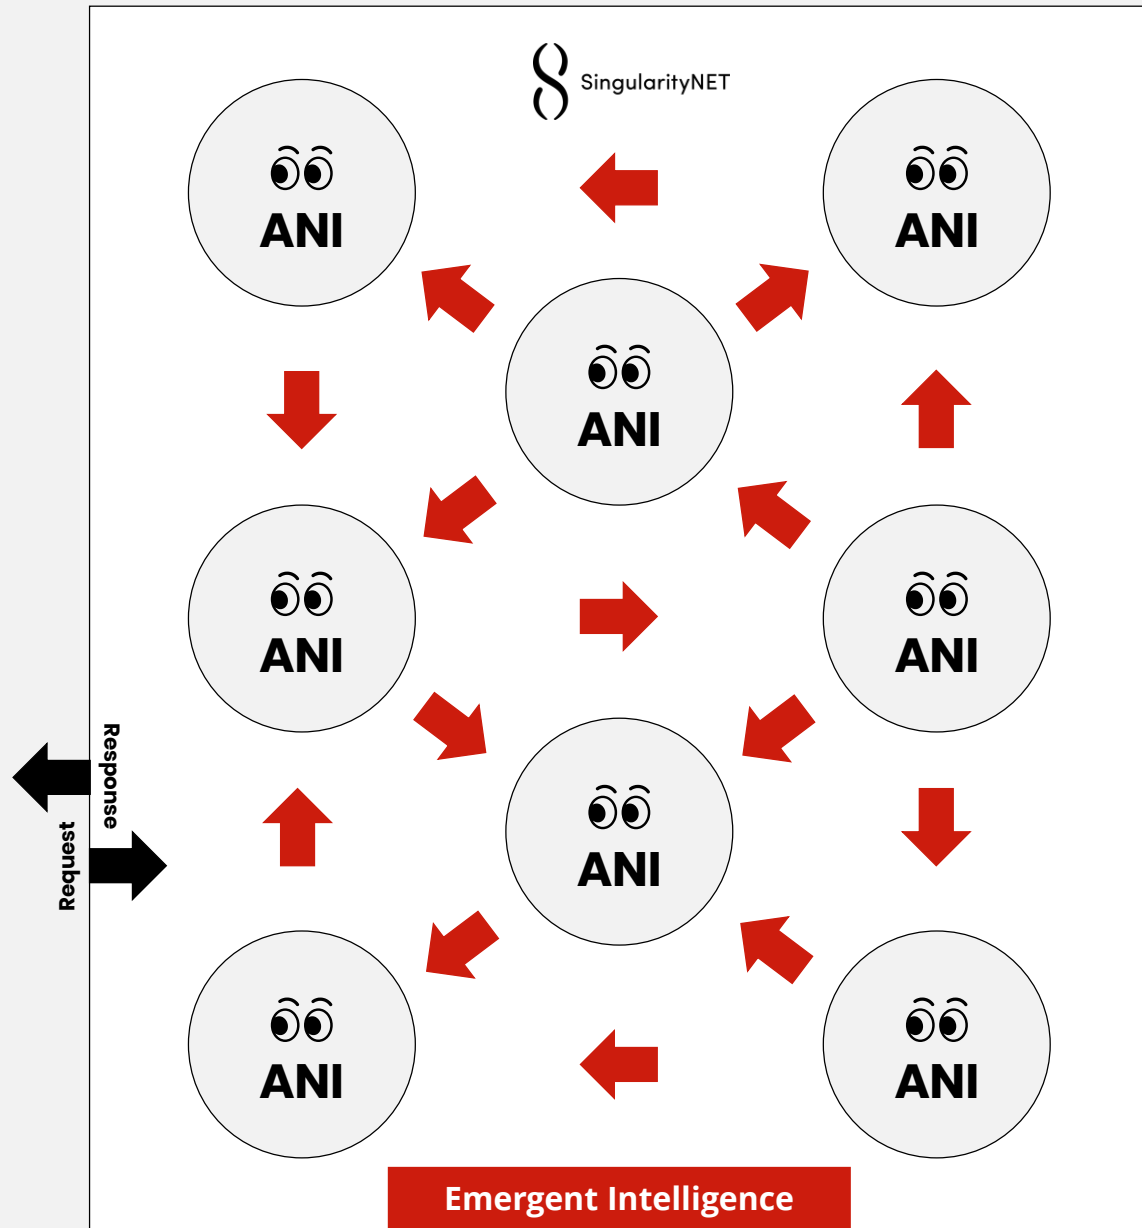

Beta March, 2019

# § SingularityNET

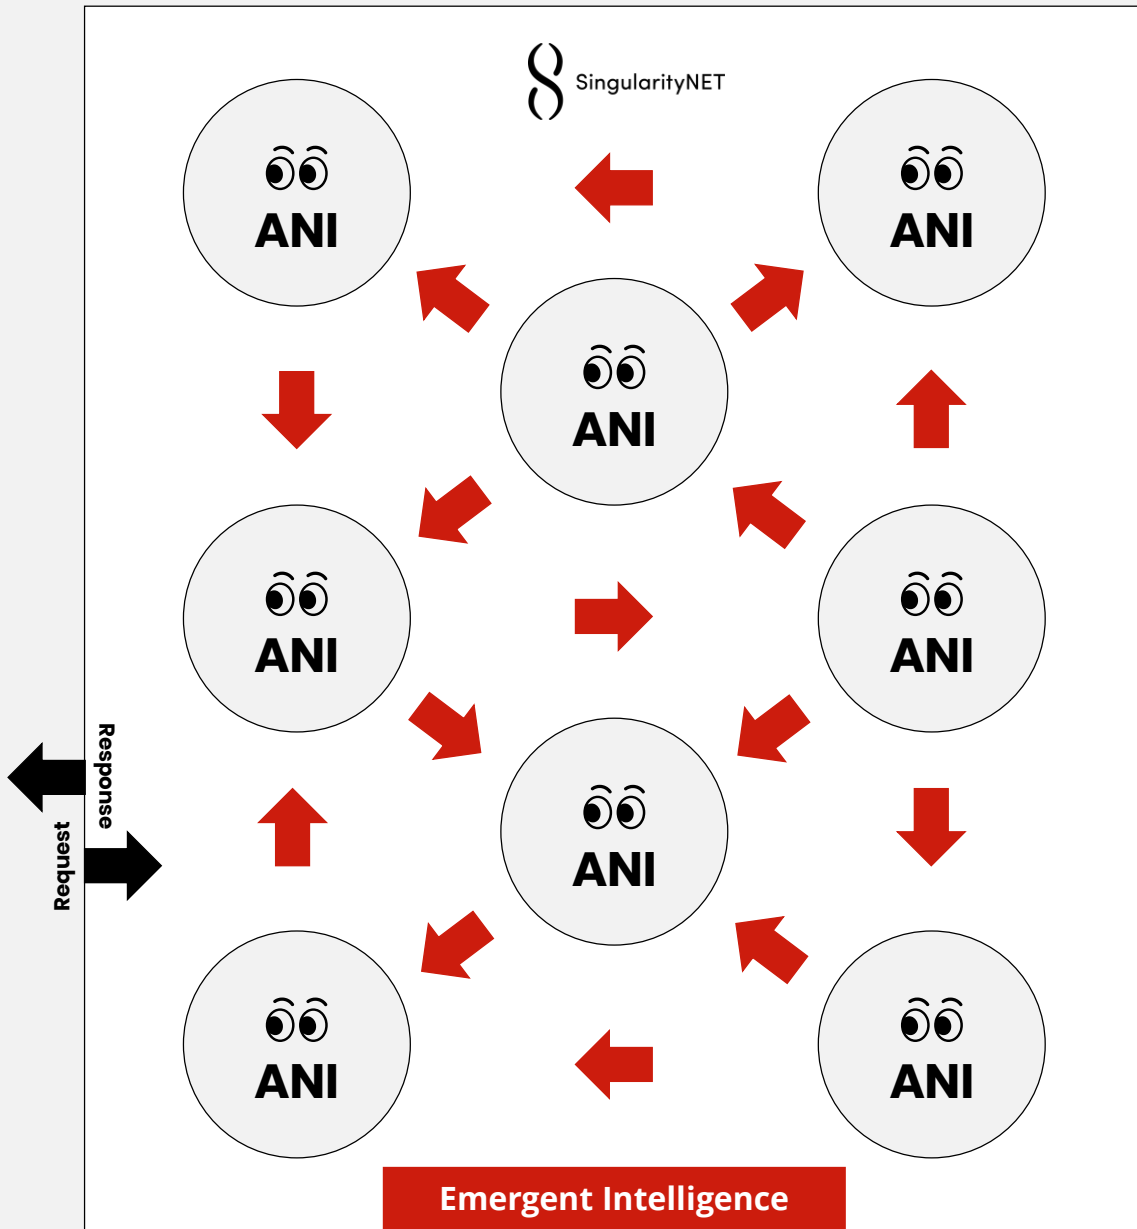

Lets anyone create, share, and monetize AI services at scale. The world's decentralized AI network has arrived.

Decentralized AI Network ◊ Blockchain-Based AI Platform

# Software Testing

:: **aka** ◊ How to challenge software to evaluate it?

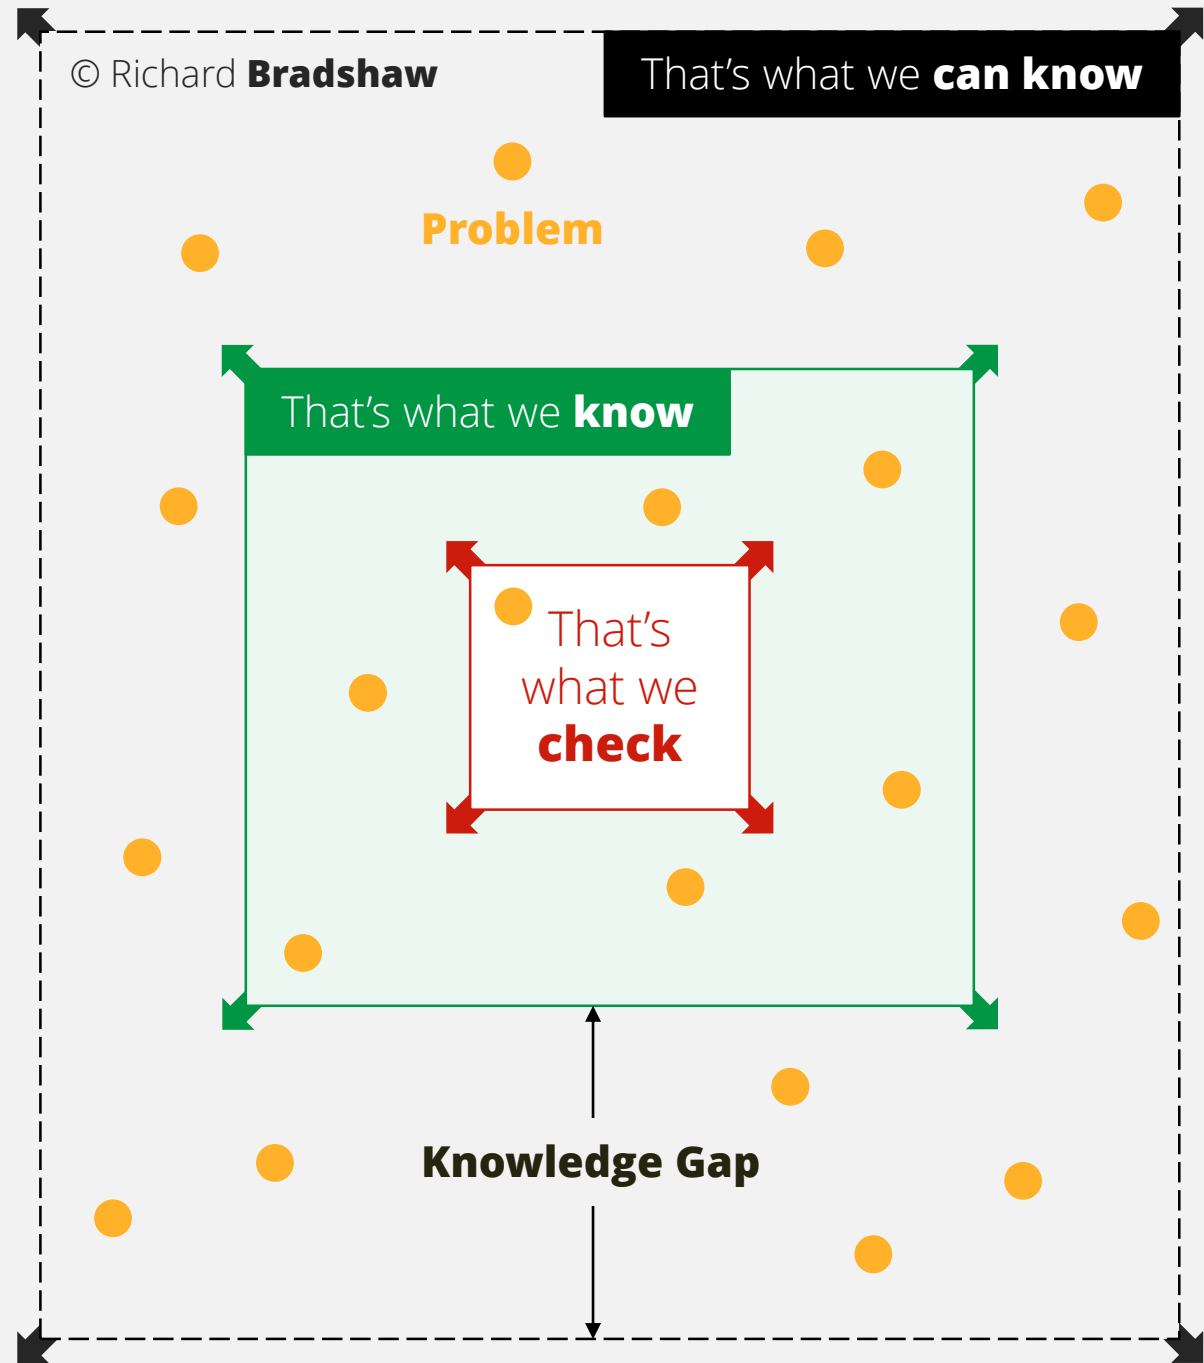

► Ecosystem of Ecosystems ◊ Network of Networks

# Software Testing

:: aka ◊ How to challenge software to evaluate it?

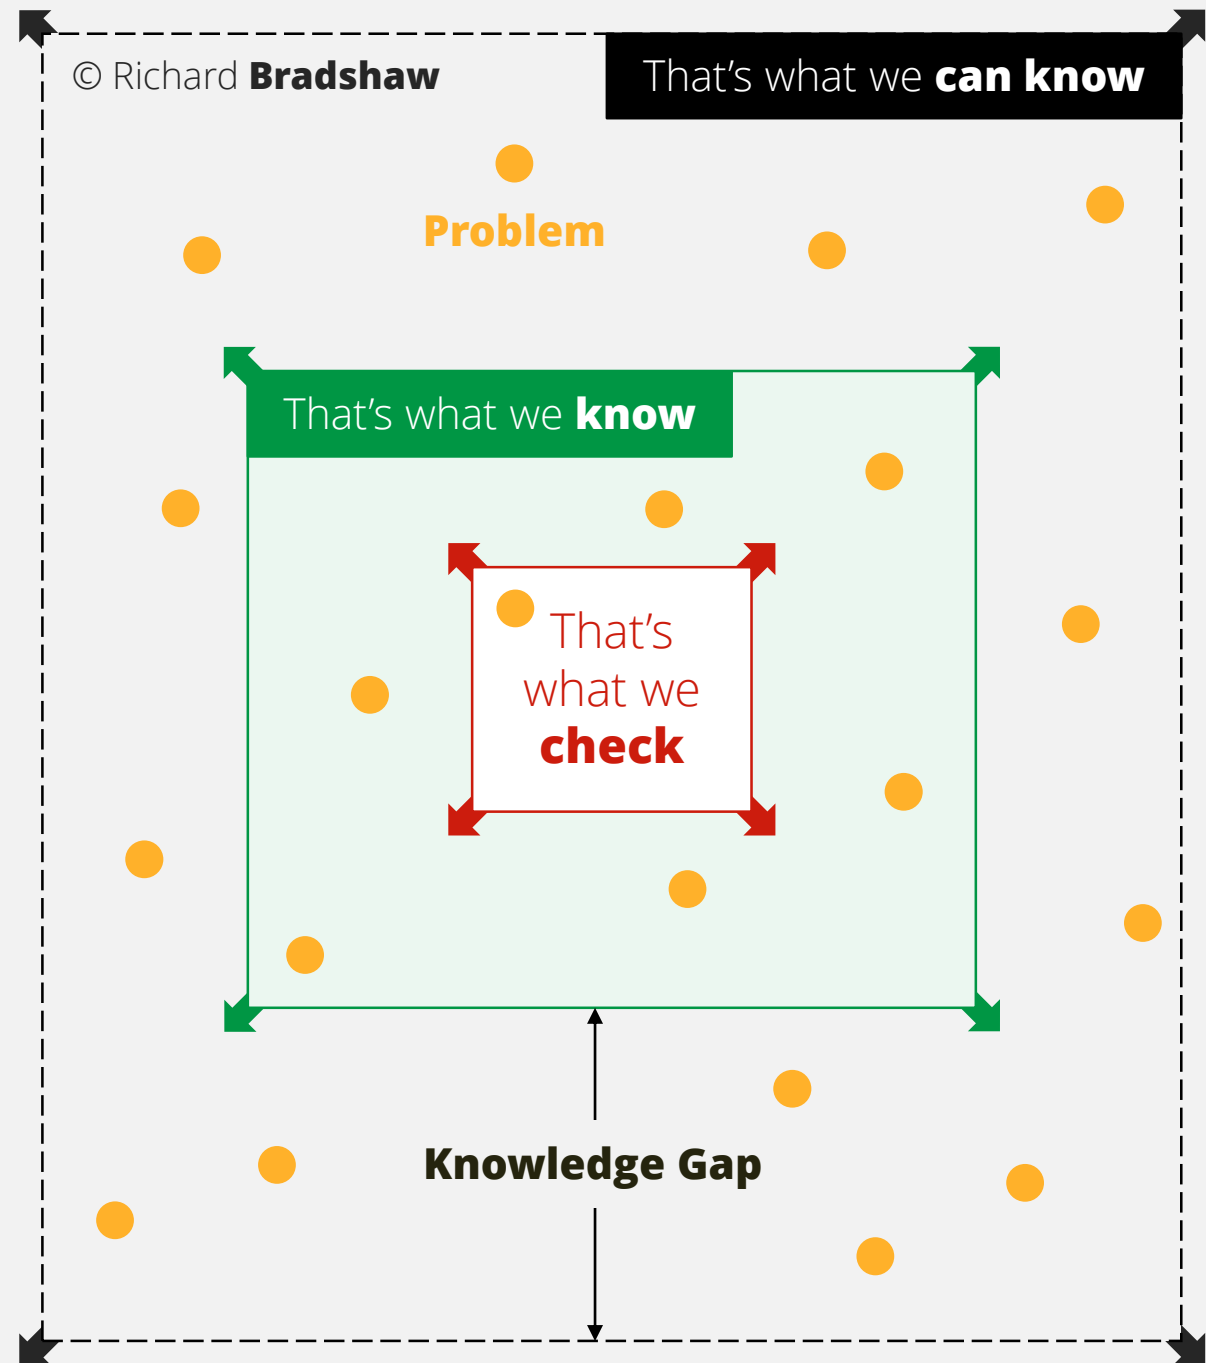

The purpose of testing is to close the **knowledge** gap

The goal is **information**, not gratuitous automation

Testing is and always will be a **search** for information

@IngoPhilipp ◊ The coin of testing has two sides.

# Checking

*Monitoring Known Risks*

+

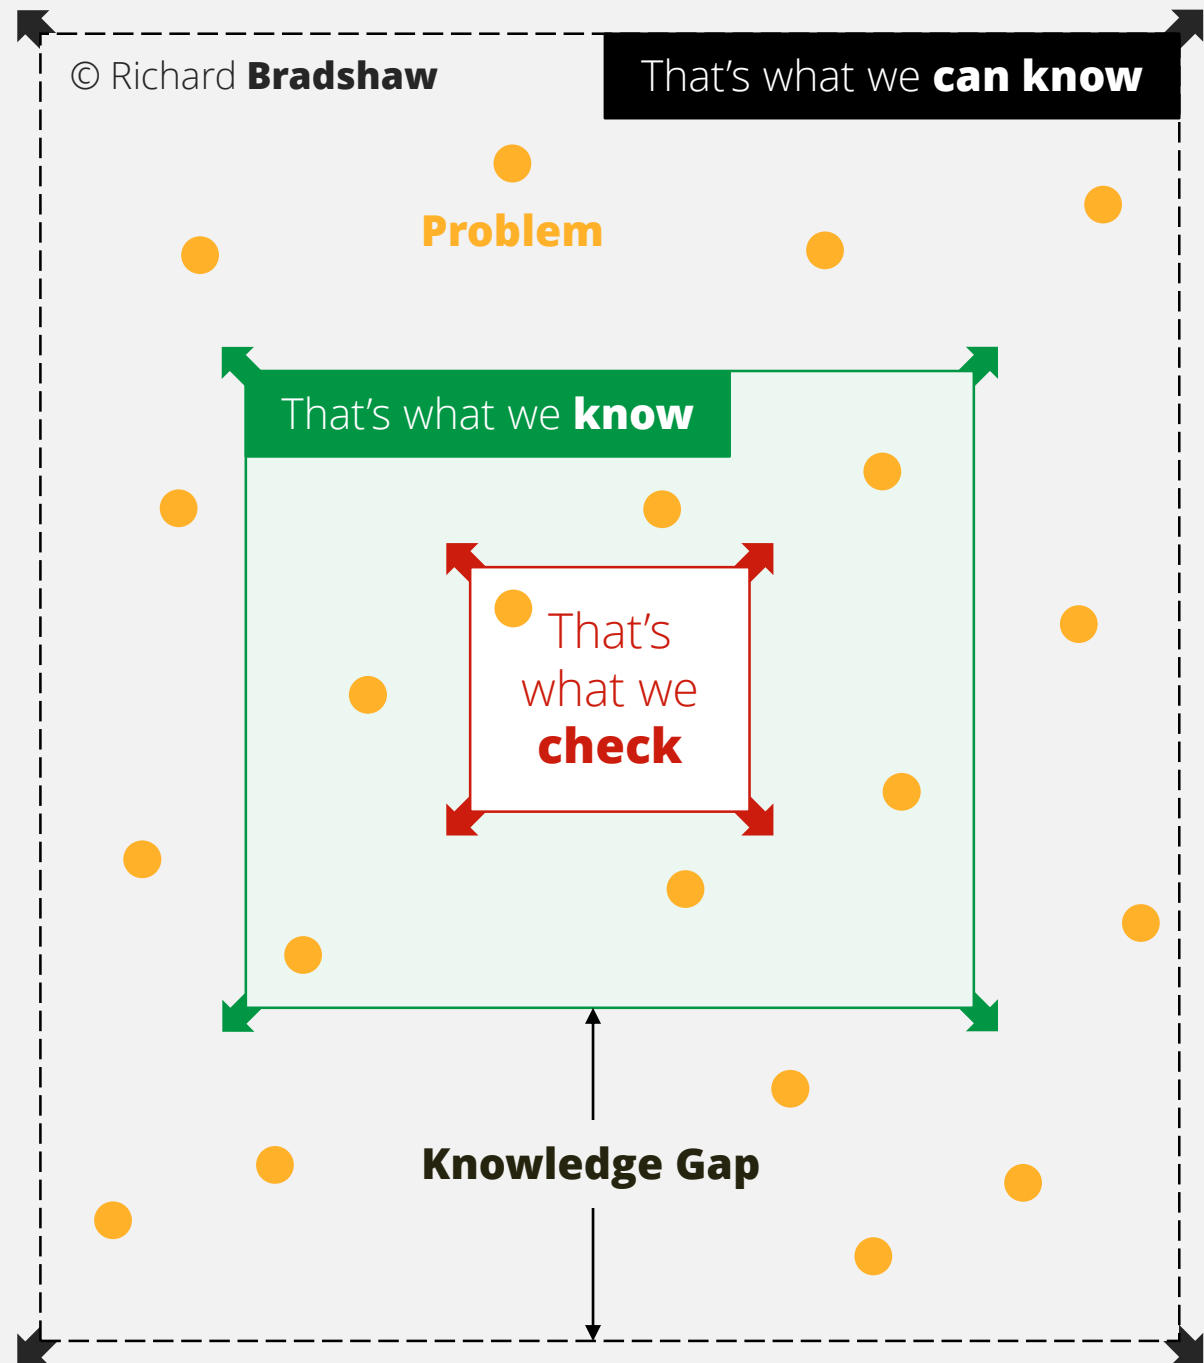

# Exploring

*Analyzing Potential Risks*

=

# Testing

:: Elisabeth Hendrickson ◊ Testing Equation

# Change Detector

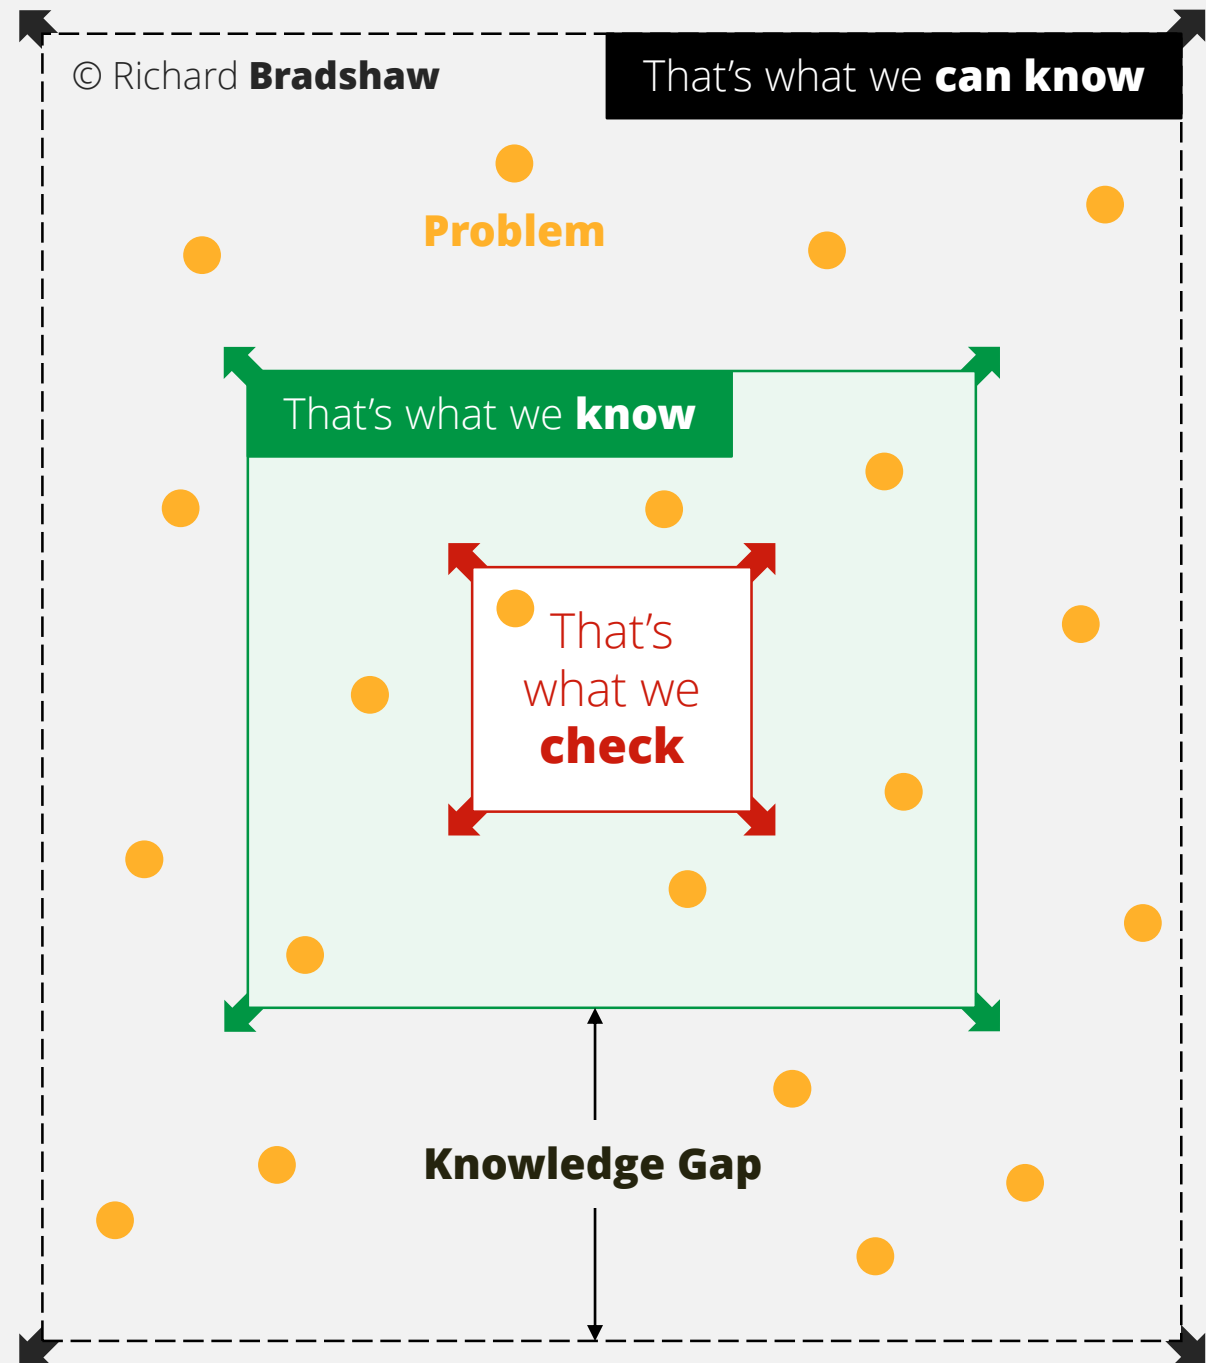

Does this *assertion* pass or fail?

Evaluate a product by applying **algorithmic** decision rules to specific observations of a product

## Checking

« Requires **Processing** »

# Change Detector

Does this **assertion** pass or fail?

Evaluate a product by applying **algorithmic** decision rules to specific observations of a product

**Checking**

« Mechanical Process »

:: **Bolton** ◊ **Kaner** ◊ **Bach**

# Problem Detector

Is there a **problem** here?

Evaluate a product by learning about it through **exploration** and experimentation

**Exploring**

« Creative Process »

## Before Checking

◁ Before the check happens ▷

You must **learn** about your software  
That takes testing skill

You must **understand** your software  
That takes testing skill

You must **recognize**, identify & prioritize a risk  
That takes testing skill

You must **translate** that risk into a test idea  
That takes testing skill

You must **express** a test idea yes-or-no question  
That takes testing & programming skill

You must **turn** the question into code  
That takes programming skill

You must **find** a trigger to launch the check  
That takes testing skill

You must **encode** the trigger to automate it  
That takes programming skill

Perform  
**Check**

## After Checking

◁ After the check happened ▷

You must **read** the bit  
That takes programming skill

You must **aggregate** bits  
That takes programming skill

You must **design** a report  
That takes design & testing skill

You must **encode** the report  
That takes programming skill

You must **observe** the report  
That takes testing skill

You must **determine** meaning  
That takes testing & product mgmt. skill

You must **judge** significance  
That takes testing & project mgmt. skill

You must **respond**  
That takes at least one of several of the skills above

@IngoPhilipp ◊ Exploration isn't something special in testing, it is central to testing, and so all true testing is exploratory.

**Automated Checking** is a tiny  
little dot in the vast space of testing

Ingo Philipp

:: **Michael Bolton** ◊ Checking is a guest in the house of testing, exploration is a permanent resident.

Here's a **substitution** of testing

- Learning
- Exploration
- Experimentation
- Modelling
- Studying
- Drawing inferences
- Questioning facts
- Assessing risks
- Prioritizing risks
- Analyzing coverage metrics
- Making decisions
- Designing test labs
- Preparing test labs
- Advocating testability
- Applying judgement
- Applying critical thinking
- Applying emotional thinking
- Applying logical thinking

*Can testing be  
automated?*

@IngoPhilipp

- **autonomiq.io**

**Claim.** Automate every step of the testing life-cycle

- **accelq.com**

**Claim.** Automate test design, test planning, and test execution

- **functionize.com**

**Claim.** Autonomous testing

- **testrigor.com**

**Claim.** Autonomous, more stable exploratory & regression testing

- **test.ai**

**Claim.** Automate testing for the most impactful user experiences

- **testim.io**

**Claim.** Speed-up authoring, execution & maintenance of automated tests

- **apptest.ai**

**Claim.** Automate exploratory & performance testing

- **mabl.com**

**Claim.** Adapt tests automatically to changing app

# *"AI-Based" Testing Tools*

Just as there's no automated programming yet, there's no **automated testing** yet

Ingo Philipp

@IngoPhilipp ◊ Testing is inherently linked to quality.

# *Quality*

Quality is **value** to some **person**  
who matters at some time

Jerry Weinberg

Our software  
is a **solution** to  
someone's problem.  
If the problem is not  
solved, the software  
doesn't work

*Quality*

Quality is **value** to some **person**  
who matters at some time

Jerry Weinberg

Quality is **subjective**

Different **stakeholders**  
will perceive the same product as  
having different levels of quality

We must look for **different things** for different stakeholders

A bug is something that **bugs somebody**. A bug is a relationship between a person and a product

*Quality*

Quality is **value** to some **person**  
who matters at some time

Quality is **subjective**

Different **stakeholders**  
will perceive the same product as  
having different levels of quality

We must look for **different things** for different stakeholders

A bug is something that **bugs somebody**. A bug is a relationship between a person and a product

▶ Testing means challenging software to evaluate it.

*Social Science*

Testing means studying humans.  
Social science is the study of humans.  
Testing is a social science.

Quality is **subjective**

Different **stakeholders** will perceive the same product as having different levels of quality

We must look for **different things** for different stakeholders

A bug is something that **bugs somebody**. A bug is a relationship between a person and a product

▶ The peculiar dignity of tacit knowledge.

# *Tacit Knowledge*

Studying humans means managing tacit knowledge

## Explicit Knowledge

Facts  
Files  
Records  
Data

**Easy to share**  
Can be formally expressed

**Hard to share**  
Cannot be formally expressed

You **know** more  
than you can tell

90% knowledge  
in any organization is  
in peoples' heads.

-- Buckman Labs --

Hunches  
Intuition  
Feelings  
Perception  
Experience

## Tacit Knowledge

Automating  
**Software Testing**

Automating  
**Social Science**

Automating  
**Tacit Knowledge**

If the human brain were so **simple** that we could understand it, we would be so simple that we couldn't

Emerson M. Pugh

# LESSONS LEARNED

*Will a bot steal your  
spot in software testing?*

The number one testing tool is not the computer, it is still the **human brain**

Jerry Weinberg

Don't expect AI to solve all your problems soon, do something about **natural stupidity** in testing now

Ingo Philipp

A man in a dark suit, white shirt, and red tie stands behind a young girl with long brown hair. They are both looking upwards against a light-colored brick wall. The man has his arm around the girl's shoulder. They are holding a large cardboard sign that reads: "ROBOT TOOK MY JOB WILL WORK FOR FOOD".

ROBOT TOOK MY JOB  
WILL WORK  
FOR FOOD

A bot that will steal your spot in software testing  
will steal **everyone's spot** everywhere too

Ingo Philipp

# Questions

Walk in with questions, walk out with answers
