

# Kotlin Compiler

In past, 1.4 and beyond

Simon Ogorodnik  
JetBrains

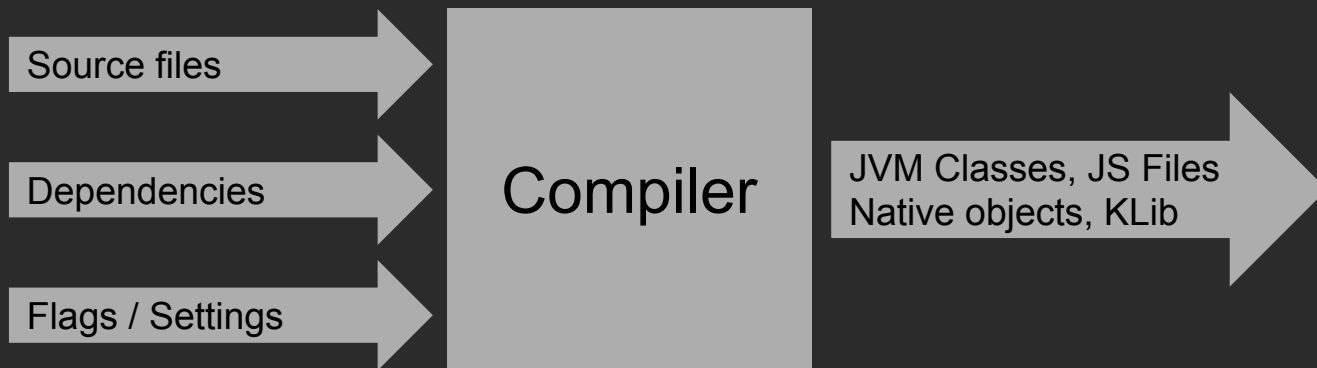

# Topics

- Compiler as a opaque box
- Kotlin Compiler Frontend
  - 1.0
  - New Inference in 1.4
  - New Frontend IR
- Kotlin Compiler Backend
  - 1.0
  - New Backend IR

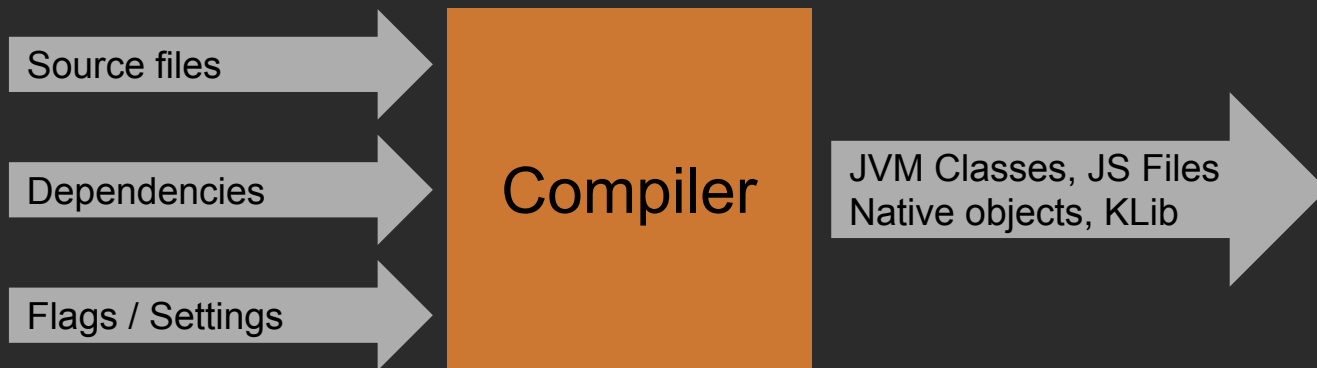

# Why?

- Major compiler changes
- Complete rewrites of huge compiler parts
- Language evolved since 1.0
- Kotlin Compiler 1.0 wasn't meant to run fast but to develop fast
- And it is 10 years old

# Semantics? Semantics!

```
fun hello(user: String) = println("Hello, $user")
```

# Semantics? Semantics!

```
public fun hello(user: kotlin.String): kotlin.String  
    defined in example in file Example.kt
```

```
fun hello(user: String) = println("Hello, $user")
```

# Semantics? Semantics!

Reference to `value-parameter user: kotlin.String`  
defined in `example.hello`

```
fun hello(user: String) = println("Hello, $user")
```

# Semantics? Semantics!

```
fun hello(user: String) = println("Hello, $user")
```

Type: kotlin.String

# Semantics? Semantics!

```
fun hello(user: String) = println("Hello, $user")
```

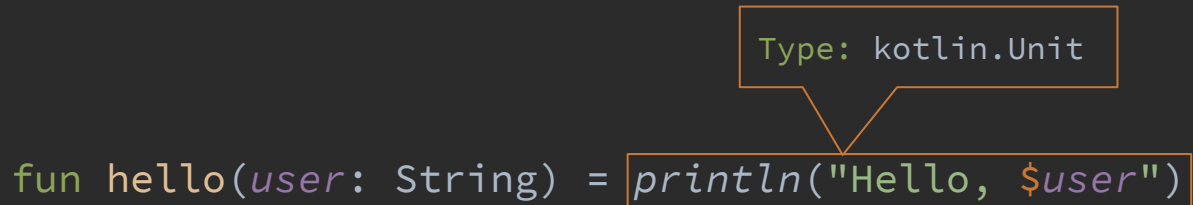

Type: kotlin.String

# Semantics? Semantics!

```
fun hello(user: String) = println("Hello, $user")
```

Type: kotlin.Unit

A diagram illustrating the semantics of a Kotlin function call. The function signature is `fun hello(user: String) =`. The function body is `println("Hello, $user")`, which is enclosed in a yellow box. A yellow callout box points to this expression, containing the text `Type: kotlin.Unit`.

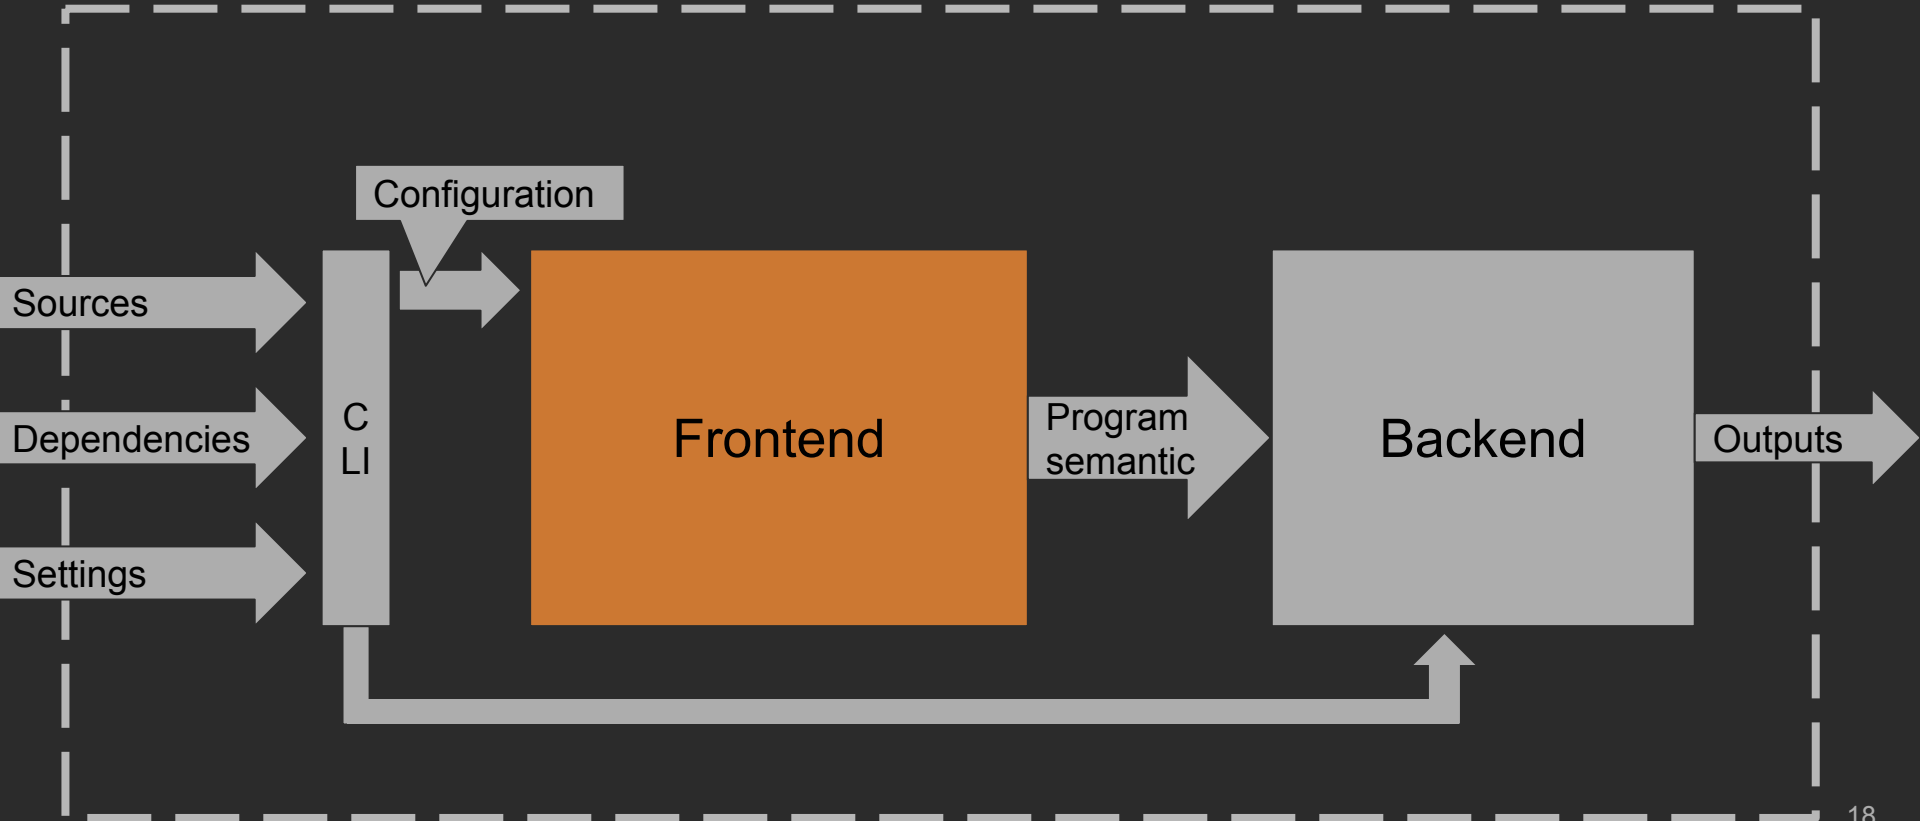

# Semantics? Semantics!

```
Call: kotlin.io.println(kotlin.String)
```

```
fun hello(user: String) = println("Hello, $user")
```

# JVM Backend 1.0

# But what about JS and Native?

- JS Backend would like to reuse existing JVM Backend components
- JS text have nothing to do with JVM bytecode
- Kotlin/Native also have nothing to do with JVM bytecode

# Backend Timeline

1.0

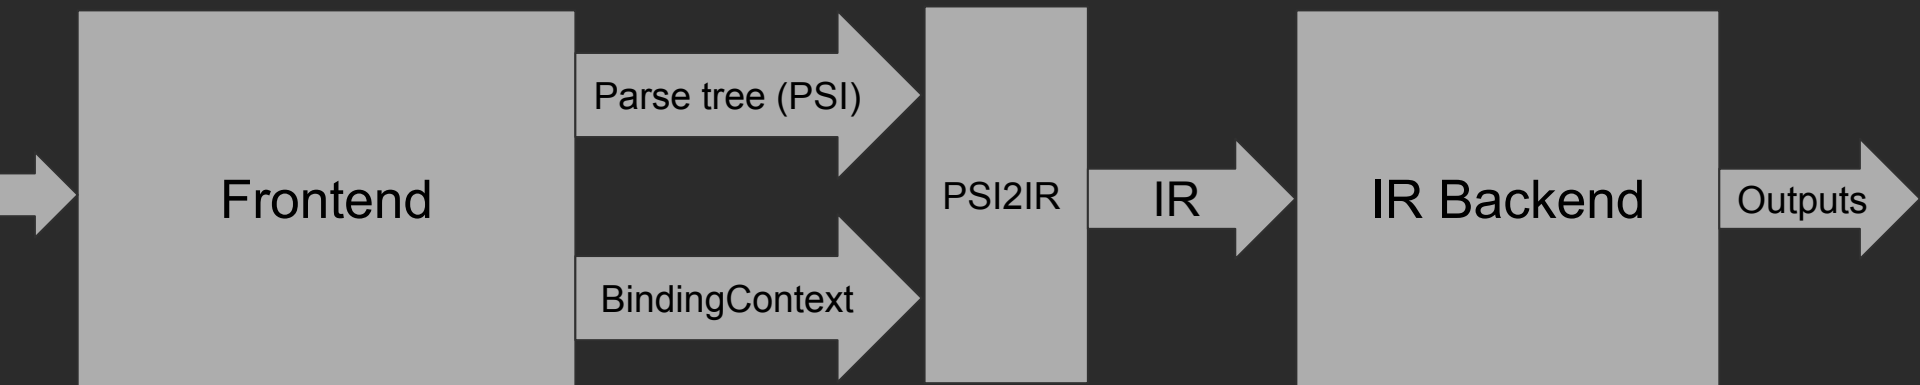

1.4

# New Backend Goals

- Avoid logic duplication in different backends
- Share high-level optimizations across different backends
- Multi-step transformations suits better for complex constructs
- Pluggability
