**MORE RULES**

eslint-plugin-sonarjs 🐛 🐷

```
function say(a, b) {  
  print(a + " " + b);  
}
```

```
say("hello", "world", "!"); // Noncompliant; last argument is not used
```

```
function foo() {  
  console.log("Hello, World!");  
}
```

```
a = foo();
```

```
if (!(a == 2)) { ... } // Noncompliant
```

**eslint-plugin-optimize-regex**

Examples of **incorrect** code for this rule:

```
const re = /[a-zA-Z_0-9][A-Z_\da-z]*\e{1,}/
```

Examples of **correct** code for this rule:

```
const re = /\w+e+/
```

The two regexes have the exact same functionality.
